

VERA HERITAGE | FOUNDER ALIGNMENT DRAFT

Founder Deliverables & Responsibility Framework

A practical operating agreement for launching the ube export business with Marc full-time, Chris part-time, and a new investor holding a capital stake.

MARC

60%

Full-time CEO, fundraising, supply, buyers, trading and ground execution.

CHRIS

20%

Part-time product, tech, compliance, documentation and digital growth lead.

INVESTOR

20%

Capital partner, strategic introductions, governance support and milestone review.

Prepared for Marc and Chris

May 2026

OPERATING PRINCIPLE

Equity should match risk, time, accountability and measurable output.

The cleanest arrangement is to separate ownership, time commitment and deliverables. Marc’s 60% should carry full-time execution pressure. Chris’s 20% should carry part-time but high-leverage technical, product and documentation responsibility. The investor’s 20% should be tied to actual capital and agreed support.

MARC | CEO / COMMERCIAL & SUPPLY LEAD

Primary mandate

Turn the company from concept into an investable, supply-backed, buyer-facing export business.

Full-time

Founder sales

Supply

Investor close

CHRIS | PRODUCT, SYSTEMS & COMPLIANCE LEAD

Primary mandate

Build the product, documentation, digital presence, compliance backbone and market-development engine.

Part-time

Tech

Product

Compliance

INVESTOR | CAPITAL PARTNER

Primary mandate

Fund agreed milestones, open doors, support governance, and avoid day-to-day operating control unless separately agreed.

Capital

Introductions

Governance

PERSON	SHARE	EXPECTED TIME	CORE ACCOUNTABILITY
Marc	60%	40-50 hours/week	Fundraising, farmer/cooperative supply, processing partners, buyer development, local raw ube trading and operating execution.
Chris	20%	10-20 hours/week	Website, product development, packaging direction, compliance documentation, certification planning, CRM/data room and technical marketing.
Investor	20%	Advisory	Capital injection, strategic introductions, milestone review and governance support.

MARC DELIVERABLES

Marc owns the full-time commercial engine: capital, supply, buyers and execution.

Marc

Investor fundraising

- Prepare and lead investor pitches.
- Maintain investor pipeline with name, status, next step and probability.
- Lead negotiations with the 20% investor and coordinate closing with legal/accounting support.
- Send weekly fundraising report to Chris and the investor, once onboarded.

Target: 30 qualified leads, 10 serious conversations, 3 term-sheet-level discussions, 1 signed agreement.

Marc

Farmer and raw ube supply

- Identify farmer cooperatives, farms, consolidators and landowners.
- Build supplier database with location, variety, hectares, harvest timing, volume, price and contact person.
- Secure initial supply commitments or MOUs.
- Organize farm visits and verify supply claims.

Target: 10 supplier leads, 5 verified visits, 3 supplier MOUs, 5-10 MT raw ube equivalent identified.

Marc

Processing partner search

- Find existing ube powder processors, dehydrators, millers, freeze-dry or spray-dry partners.
- Request quotations for small-batch sample production.
- Compare pricing, MOQ, certifications, lead time and packaging capability.
- Coordinate raw material logistics from farm to processor.

Target: 5 processor leads, 3 formal quotes, 1 selected pilot processor, 1 completed test batch.

Marc

Buyer and distributor development

- Build buyer list for US, Europe, Middle East and local institutional buyers.
- Contact importers, Filipino distributors, specialty cafes, bakeries, ice cream makers, beverage brands and ingredient buyers.
- Pitch samples and collect feedback on flavor, color, moisture, packaging, pricing and MOQ.
- Secure LOIs, sample requests or trial orders.

Target: 100 leads, 30 buyer conversations, 10 sample requests, 3 LOIs or pilot purchase discussions.

MARC DELIVERABLES CONTINUED

Local raw ube trading can create early cash flow, but it needs discipline.

CASH FLOW TRACK

Local raw ube trading

- Source raw ube locally.
- Find local buyers: processors, bakeries, halaya makers, traders, restaurants and food manufacturers.
- Track buying price, transport cost, shrinkage, spoilage, selling price and margin.
- Create weekly trading P&L.
- Avoid speculative inventory without confirmed buyers.

Target: first trading transaction within 30-60 days, with agreed minimum gross margin, for example 15-25%.

GROUND EXECUTION

Operations management

- Weekly field updates.
- Supplier and buyer meeting reports.
- Logistics coordination.
- Government, LGU and cooperative relationship building.
- Basic manpower coordination when needed.

Rule: Marc is the accountable operator because his 60% share is based on full-time leadership.

Trading should support the export strategy, not distract from it. Every local raw ube transaction should teach the business something about price, quality, seasonality, spoilage, farmer reliability or buyer demand.

TRADING RULE	PURPOSE	OWNER
No uncommitted bulk inventory	Prevents spoilage and cash traps.	Marc
Written transaction P&L	Shows whether trading is really profitable after transport and shrinkage.	Marc, reviewed by Chris
Supplier quality notes	Creates early data for future export supply.	Marc collects, Chris stores
Cash reinvestment policy	Clarifies whether profits fund samples, operations or founder distributions.	Joint decision

CHRIS DELIVERABLES

Chris owns the product, compliance, digital and documentation backbone.

Chris

Product development

- Define flagship export-grade ube powder spec.
- Define secondary concepts: foodservice ube base, halaya, extract and VCO extension.
- Create product briefs and buyer feedback forms.
- Develop sample packaging mockups and recommended sample sizes.
- Prepare product comparison versus taro, sweet potato powder, artificial ube flavor and competitor powders.

Target: final spec sheet, 2-3 packaging mockups, 1 buyer-ready sample kit and comparison sheet.

Chris

Certification and documentation management

- Create compliance checklist for US, EU, UK and Middle East.
- Prepare templates for product specs, COA request, batch record, farm traceability, processor audit, sample shipment and buyer feedback.
- Identify FDA Philippines, HACCP/GMP, halal, US FDA, EU/UK label and traceability requirements.
- Maintain investor and buyer data room.

Target: complete compliance tracker, document template library and first batch documentation package.

Chris

Website and digital presence

- Build Vera Heritage landing page or website.
- Position the company around authentic Philippine ube, traceable supply and export-grade ingredients.
- Add product page, buyer inquiry form and investor deck request flow.
- Set up domain, business email, analytics and CRM capture.
- Create downloadable product one-pager.

Target: website live, inquiry form working, analytics installed, product PDF uploaded, email domain active.

Chris

Online marketing and buyer outreach system

- Create CRM or spreadsheet pipeline.
- Prepare email templates for importers, bakeries, beverage brands, ice cream makers, Filipino distributors and ingredient buyers.
- Create LinkedIn/company profile and competitor positioning notes.
- Build sample-request workflow and buyer outreach dashboard for Marc.

Target: 200 researched leads, 5 email templates, CRM live, company profile live.

CHRIS DELIVERABLES CONTINUED

The back office has to make the business look bigger, cleaner and more reliable than a raw trading operation.

INVESTOR MATERIALS SUPPORT

Technical and product proof

- Maintain pitch deck technical appendix.
- Prepare product-market research notes.
- Prepare compliance explanation and product roadmap.
- Prepare unit economics model structure.
- Prepare FAQ answers on product, export path, processing, certifications and documentation.

Target: investor data room and appendix ready before serious investor meetings.

PRODUCT TESTING AND QUALITY SYSTEM

Batch discipline

- Define quality requirements: moisture, color, flavor, microbiology, heavy metals, pesticide screen, shelf-life and water activity when applicable.
- Identify labs and testing costs.
- Create batch numbering and traceability code structure.
- Store lab results and batch documents.

Target: lab shortlist, testing cost table, batch code system and sample batch documentation folder.

Chris's contribution should be judged less by hours alone and more by leverage: does Marc have better tools to pitch, sell, document, ship samples and pass diligence because of Chris's work?

ASSET	WHY IT MATTERS	PRIMARY OWNER
Website and buyer inquiry funnel	Makes the business credible to overseas buyers and investors.	Chris
Compliance tracker and document templates	Prevents buyer conversations from collapsing during due diligence.	Chris
CRM and outreach dashboard	Lets Marc convert leads systematically instead of relying only on memory and chats.	Chris builds, Marc uses
Sample kit and product specs	Turns ube from a story into something buyers can test, price and reorder.	Chris product, Marc selling

SHARED DELIVERABLES

Shared work is allowed, but accountability should not be blurry.

WORKSTREAM	ACCOUNTABLE	SUPPORT	DELIVERABLE
Flagship strategy	Joint	Investor advisory	Confirm export-grade ube powder as flagship; foodservice base as second SKU; VCO, halaya and extracts as later extensions.
Farmer and land supply	Marc	Chris can help find farmers and land	Supplier database, verified farm visits, MOUs and seasonal supply map.
Product samples	Chris for product/packaging/docs	Marc for sourcing/processor/buyer shipment	Buyer-ready sample kit with product spec, label draft, COA path and feedback form.
Investor close	Marc	Chris for data room and compliance proof	Signed investment terms, use of funds, founder agreement and milestone plan.
Local raw trading	Marc	Chris reviews tracking system	Transaction log, weekly P&L, quality notes and reinvestment decision.
Monthly operating review	Joint	Investor once onboarded	Progress against deliverables, cash use, buyer status, supply status and next-month priorities.

The practical rule: whoever is accountable must chase the result. The supporting person can contribute, but should not become the reason the work stalls.

FIRST 90 DAYS

The first phase should produce proof, not just plans.

DAYS 1-30 | FOUNDATION

Decide and build

- **Marc:** supplier list, cooperative meetings, processor leads, investor pipeline, local raw ube buyer search.
- **Chris:** website structure, product spec draft, compliance checklist, CRM/data room, packaging direction.
- **Joint:** finalize flagship, sample budget, local trading rules and written founder deliverables.

DAYS 31-60 | PROOF

Make and test

- **Marc:** supplier MOUs, pilot processor, buyer outreach, investor pitches, first local trading transaction if profitable.
- **Chris:** live website, buyer materials, packaging mockup, shipment docs, batch/traceability system.
- **Joint:** produce first sample batch or secure third-party powder sample under Vera branding.

DAYS 61-90 | VALIDATION

Convert interest

- **Marc:** LOIs or paid sample orders, investor commitment, expanded supplier commitments, better processing terms.
- **Chris:** lab testing package, refined specs, investor data room, improved website and outreach funnel.
- **Joint:** decide toll processing, raw trading priority, own processing plan and 12-month budget.

90-DAY SUCCESS MEANS

EVIDENCE

Vera can access real ube supply.

Signed MOUs, farm visit records, supplier database and price/volume map.

Vera can produce or source buyer-ready samples.

Sample kit, packaging, product spec, processor quote and testing path.

Vera can reach buyers.

CRM, outreach records, sample requests, feedback, LOIs or paid trials.

Vera can raise responsibly.

Investor pipeline, data room, use of funds and milestone-based close.

Put the expectations in writing before money, farmers and buyers are involved.

- Founder vesting schedule for Marc and Chris.
- What happens if Marc stops being full-time.
- What happens if Chris cannot contribute part-time.
- What counts as acceptable weekly/monthly deliverables.
- Who has final decision rights.
- Spending approval limits.
- When salaries begin, if cash flow allows.
- Whether local trading profits are reinvested or distributed.
- Whether equity changes if responsibilities materially change.

Marc's 60% is tied to full-time CEO execution.

Chris's 20% is tied to part-time product, systems, compliance and technical marketing contribution.

Investor's 20% depends on actual capital injection and agreed support terms.

If either founder materially stops contributing before an agreed period, unvested shares should return to the company.

Equity conversations are uncomfortable now, but they are much cheaper before there are purchase orders, investor money, farmer commitments and family expectations attached to the company.
